REALIZING THE VISION

The Statewide Information Coordination Consortium (SWICC) promotes:

Removing Barriers - identify and resolve barriers to information coordination

Comparing Apples - promote collection of comparable state and local data

Seamless Views - facilitate views of statewide government services

Accessibility - provide easy access to information that supports analysis and decision making

Tools - provide guidelines, tools, and model frameworks that aid information coordination efforts

Building on Lessons Learned - share coordination best practices and leverage resources

NEXT STEPS

Over the 2005-2007 biennium, SWICC will work with state and local stakeholders to:

- compile a web-based, searchable directory of reliable and trusted data sources
- facilitate collaboration and communication across performancerelated efforts
- determine best fit for the concept, tools and technology applied in the "Showcase Washington" prototype web site (http://swicc.leg.wa.gov)
- continue to promote successful crossgovernmental information coordination

ABOUT SWICC

The Statewide Information Coordination Consortium (SWICC) is comprised of:

Association of Washington Cities (AWC)

Department of Information Services (DIS)

Joint Legislative Audit & Review Committee (JLARC)

Legislative Evaluation & Accountability Program (LEAP) Committee

Municipal Research & Services Center (MRSC)

Office of Financial Management (OFM)

State Auditor's Office (SAO)

Washington Finance Officers Association (WFOA)

Washington State Association of Counties (WSAC)

Additional information about SWICC is available on the Internet at: http://leap.leg.wa.gov/leap/special/sdci.asp

If you have questions regarding SWICC or related efforts, please contact Lori Bame, SWICC Coordinator:

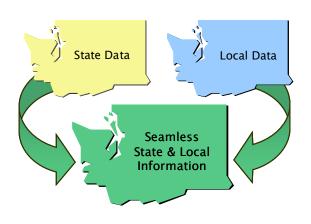

(360) 786-6115 or Bame.Lori@leg.wa.gov

Washington Statewide Information Coordination Consortium

A collaborative effort of Washington state & local governments

Better Information for Better Decisions

State and local governments bringing together information necessary to make decisions and demonstrate governmental accountability

"When people want to interact with government, they don't know all the different divisions, forms, and layers. They don't know that something is the responsibility of a city, county or state, [or] hybrid forms of government."

Former Governor Locke

Government as a whole must do a better job communicating the relationship between the cost and results of services.

126 state agencies, 39 counties, 281 cities and towns, and thousands of special purpose districts and not-for-profits all provide services to the citizens of Washington State.

Lack of consistency and comparability of data make it difficult to respond to an increasing demand for "enterprise" or statewide information that crosses governmental silos.

We live in the information age and expect immediate answers

We're drowning in data

Data is not information

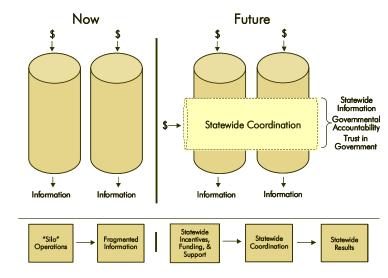

Information is needed to respond to emergent issues and demonstrate accountability

We need to transform data into useful information to support better decisions

Better Information for Better Decisions...

The Statewide Information Coordination Consortium (SWICC) is a resource that helps state and local governments collaboratively transform data into relevant and seamless statewide information.

SWICC is a catalyst for enabling change in the following areas:

- Leadership develop cross-governmental governance and funding
- Underlying Infrastructure move away from managing solely to individual budgets toward managing for statewide outcomes
- Enterprise Support facilitate the success of statewide information coordination efforts

Now is a good time to promote statewide information coordination because:

Need

- Government leaders and the public are not content with fragmented information
- Budget pressures necessitate coordination and elimination of redundancies
- Critical public services, such as transportation and public safety, require the sharing of information

Climate

- The "Priorities of Government" approach to budgeting supports a state enterprise perspective
- The Governor's Government Management, Accountability and Performance (GMAP) process uses performance information that crosses the silos of state agencies
- Local governments are exploring ways to articulate "core services" and priorities of government
- The federal government enterprise architecture is a model for a seamless federal government
- State, local, and federal governments want to align their efforts to better communicate and serve their common client ...the citizen

Technology

 The technology is available to support information coordination and improve accessibility to information
